EXECUTIVE SUMMARY

What we found

The website for Align Braces Clinic presents several high-priority issues that, if addressed, could significantly enhance user experience and conversion rates. Key areas include visual hierarchy, mobile responsiveness, SEO optimization, and analytics tracking.

Opportunity: 8/10

Confidence: 96/100

Main Problems Detected

- Lack of clear visual hierarchy in design
- Mobile responsiveness could be improved

Recommended Focus Areas

- Enhance the layout to guide users through the content more effectively.
- Ensure all elements are responsive and user-friendly on mobile devices.

Why This Matters

The highest-value improvements for Align Braces Clinic - Plaza Singapura are the ones that make the offer easier to understand, reduce trust friction, and shorten the route to contact. That is where this report keeps its focus.

PRIORITY 1

Lack of clear visual hierarchy in design

Severity: HIGH

Confidence: 96/100

Captured website evidence

Evidence

Lack of clear visual hierarchy in design.

Why this is a business problem

This can slow down decisions and make it easier for visitors to leave without contacting the business.

Proposed solution

Enhance the layout to guide users through the content more effectively.

Expected impact

A smoother decision journey and fewer drop-off points before contact.

PRIORITY 2

Mobile responsiveness could be improved

Severity: HIGH

Confidence: 96/100

Captured website evidence

Evidence

Mobile responsiveness could be improved.

Why this is a business problem

This can reduce conversions by adding friction right before a visitor is ready to act.

Proposed solution

Ensure all elements are responsive and user-friendly on mobile devices.

Expected impact

A faster path from visitor interest to contact or booking.

PRIORITY 3

SEO optimization is lacking in some areas

Severity: MEDIUM

Confidence: 92/100

Captured website evidence

Evidence

SEO optimization is lacking in some areas.

Why this is a business problem

This can make it harder for the business to turn search demand into qualified visits and enquiries.

Proposed solution

Implement better keyword strategies and meta tags for improved search visibility.

Expected impact

More qualified visibility from the searches that matter most.

PRIORITY 4

Analytics tracking is not fully implemented

Severity: MEDIUM

Confidence: 88/100

Captured website evidence

Evidence

Analytics tracking is not fully implemented.

Why this is a business problem

This can slow down decisions and make it easier for visitors to leave without contacting the business.

Proposed solution

Rewrite the section more clearly, reinforce trust, and make the next step more obvious.

Expected impact

A smoother decision journey and fewer drop-off points before contact.

RECOMMENDED NEXT STEPS

What should happen next

3-step action plan

- 1 Prioritise lack of clear visual hierarchy in design first because it sits closest to the first impression and enquiry decision.
- 2 Use the visual evidence in this report to tighten messaging, trust proof, and contact flow on the highest-intent pages.
- 3 Reply to the outreach email or book a short call to review the quickest wins and decide what should be fixed first.

Suggested quick wins

1. Enhance the layout to guide users through the content more effectively. 2. Ensure all elements are responsive and user-friendly on mobile devices.
