EXECUTIVE SUMMARY

What we found

The Braces Practice has significant opportunities to enhance its online presence through improvements in visual design, mobile responsiveness, and SEO optimization. Addressing these issues can lead to better user engagement and increased conversions.

Opportunity: 8/10

Confidence: 96/100

Main Problems Detected

- Visual design lacks modern aesthetics
- Mobile responsiveness could be improved
- SEO optimization is lacking

Recommended Focus Areas

- Revamp the website's visual design
- Enhance mobile responsiveness
- Optimize on-page SEO elements

Why This Matters

The highest-value improvements for The Braces Practice are the ones that make the offer easier to understand, reduce trust friction, and shorten the route to contact. That is where this report keeps its focus.

PRIORITY 1

Visual design lacks modern aesthetics and could benefit from a refresh

Severity: HIGH

Confidence: 96/100

Captured website evidence

Evidence

Visual design lacks modern aesthetics and could benefit from a refresh. Detected platform: wordpress.

Why this is a business problem

This can slow down decisions and make it easier for visitors to leave without contacting the business.

Proposed solution

Revamp the website's visual design to align with modern aesthetics and improve user engagement.

Expected impact

A smoother decision journey and fewer drop-off points before contact.

PRIORITY 2

Mobile responsiveness could be improved for better user experience

Severity: HIGH

Confidence: 96/100

Captured website evidence

Evidence

Mobile responsiveness could be improved for better user experience. Detected platform: wordpress.

Why this is a business problem

This can reduce conversions by adding friction right before a visitor is ready to act.

Proposed solution

Enhance mobile responsiveness to ensure a seamless experience across devices.

Expected impact

A faster path from visitor interest to contact or booking.

PRIORITY 3

SEO optimization is lacking in some areas, affecting visibility

Severity: MEDIUM

Confidence: 92/100

Captured website evidence

Evidence

SEO optimization is lacking in some areas, affecting visibility. Detected platform: wordpress.

Why this is a business problem

This can make it harder for the business to turn search demand into qualified visits and enquiries.

Proposed solution

Optimize on-page SEO elements such as meta tags, headings, and content for better search engine visibility.

Expected impact

More qualified visibility from the searches that matter most.

PRIORITY 4

Page loading speed is slower than industry standards

Severity: MEDIUM

Confidence: 88/100

Captured website evidence

Evidence

Page loading speed is slower than industry standards. Detected platform: wordpress.

Why this is a business problem

This can slow down decisions and make it easier for visitors to leave without contacting the business.

Proposed solution

Rewrite the section more clearly, reinforce trust, and make the next step more obvious.

Expected impact

A smoother decision journey and fewer drop-off points before contact.

RECOMMENDED NEXT STEPS

What should happen next

3-step action plan

- 1 Prioritise visual design lacks modern aesthetics and could benefit from a refresh first because it sits closest to the first impression and enquiry decision.
- 2 Use the visual evidence in this report to tighten messaging, trust proof, and contact flow on the highest-intent pages.
- 3 Reply to the outreach email or book a short call to review the quickest wins and decide what should be fixed first.

Suggested quick wins

1. Revamp the website's visual design to align with modern aesthetics and improve user engagement. 2. Enhance mobile responsiveness to ensure a seamless experience across devices.
